

## **Network management system permitting remote management of systems by users with limited skills**

### **Abstract of the Disclosure**

A method and system to establish and delegate control of client-server computer systems over a wireless network according to policies established dynamically by an authority. In particular, one embodiment of the present invention includes a system to specify and promulgate user and command profiles that constrain wireless handsets to execution of commands specified in said user and command profiles, to specify and execute general-purpose computer commands to computers that are nodes in distributed networks or sub networks from a wireless device together with a method and system to monitor the status of specified computer services and specified computers and alert the wireless device user to exceptional conditions.
